

## **BPES upgrades server to meet new hybrid working challenges**

Based in Sittingbourne, Kent, BioProcess Engineering Services Ltd (BPES) was founded in 1996 and have been providing specialist equipment and maintenance services to the BioTechnology industry for over 20 years. They are an approved partner for some of the most respected names in the Biotechnology sector.

The previous Linux server at BPES was reliable but was reaching end of life. They discussed their replacement options with Kieran from Invicta Linux and decided opt for an EOS (Easy Office Server).

“The migration went smoothly and the team from Invicta Linux were on hand to provide training and guidance at both the admin and user level to ensure everyone was comfortable with the new server and all its capabilities. This included enabling us to customise the system to suit our needs, giving us all the training we needed to feel confident with the system.

The new private cloud solution enabled us to collaborate with anyone including clients, anywhere using a web browser or the local client based on our machines. It has enabled us to work closer and truly collaborate with our suppliers and our clients.

We opted for the contract hire option, which means that all the maintenance, checks and support is covered and Invicta Linux monitor the server to make sure everything is working as best it can. This means I don't have to worry about being first, second and third line support as well as doing my job, I have Invicta Linux always on hand to help us.

We're very happy with our new server with all its functionality and would recommend EOS to any business.”

- Tom Burdick, Director
